THEORY OF MICROWAVE PHASE AND AMPLITUDE
COMPARISON (MONOPULSE RADAR). [1960] 36p.
Order from SLA m\$3.00, ph\$6.30 61-10455

Trans. of Annales de Radioelectricité (France) 1958,
v. 13, Apr, p. 130-139.

Having briefly recalled the general principles of operation of radars using the comparison of phases or amplitudes of signals received, the author sets out the formulae giving the values of the sum and difference of these signals. The value of the quotient of the difference by the sum is then determined as a function of the antenna pattern, the quotient being zero on the antenna axis. The variation of the direction of this axis is then examined as a function of the unbalanced conditions in the circuits shaping the sum and difference signals and conclusions are drawn in respect to the structure and position of these circuits.
